We have investigated the possibility of utilizing the optical transmission within hybrid plasmonic waveguides. The hybrid plasmonic waveguide design enables nanoscale scale integration of the hybrid plasmonic structure, due to its inter-digitated ridges. We demonstrate experimentally that this feature can greatly improve the optical transmittance of thin metal films. Using experimentally measured and designed waveguide structures, we have obtained an estimated improvement of the optical transmittance of as much as 45.1%.Q: Is $-z^{2}-1$ a injective function? I've to prove that $-z^{2}-1$ is an injective function, where z is a complex variable. It seems very simple. By definition, f is injective if $\forall a,b \in F$ and $f(a)=f(b)$ then $a=b$ So here is my proof : Let $z,w \in \mathbb{C}$ with $z^{2}+1=w^{2}$ (this means $-1-z^{2}=-1-w^{2}$) $\Rightarrow$ $-z=w$ and $-z^{2}=w^{2}$ $\Rightarrow$ $-z^{2}-1=w^{2}-1$ $\Rightarrow z^{2}=w^{2}-1$ and so $z=w$ Am I right? A: We have $w^2 = z^2 +1 = w^2 +1$
